

# Flake Flooring

CR-Flake Flooring is a decorative, seamless flooring system consisting of 100% solids epoxy and decorative chips. CR-Flake Flooring has a durable polyaspartic topcoat which provides excellent wear characteristics plus stain and chemical resistance. CR-Flake Flooring is low odor, VOC compliant and meets ADA, USDA, FDA and OSHA standards.

In the industry, epoxy flake flooring systems continue to gain a large popularity amongst architects, designers, contractors and consumers. Flake Floorings provide unique properties that deliver complete customization to commercial, residential, retail and industrial floors with an endless array of color-styles, textures, sizes and blending options.

What separates CR-Flake Flooring from other similar products? It's simple - our experience. Keefe uses only the best products. By utilizing a non-traditional polyaspartic sealer, the cure time is reduced to enable a faster completion time.

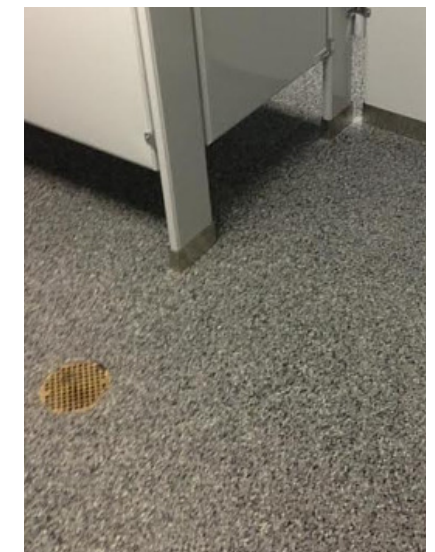

CR-Flake Flooring provides the confidence and proven results that consistently meet the quality expectations of our team and trusted clients.
